

XVI SOLANACEAE CONFERENCE

YIELD & NUTRITION

Idan Efroni - Bio

I have obtained my Ph.D. from the Weizmann Institute, in Israel, working on regulation of leaf development in the lab of Prof. Yuval Eshed, followed by a post-doc with Prof. Ken Birnbaum at NYU where I studied root regeneration and developed tools for single-cell transcriptomics in plants. In 2016, I started my lab at The Hebrew University where we investigate root meristem initiation and regeneration in Arabidopsis and tomato. Since 2017, I am also an HHMI International Research Scholar.
